ENTITIES (SCHEMA: CUSTOMER)

customers

PK id (UUID)
IDX tenant_id (UUID)
FK user_id (UUID)
first_name · last_name
phone · email
date_of_birth
loyalty_points (INT)
tier (BRONZE→PLATINUM)
total_orders (INT)
total_spent (DECIMAL)
created_at · updated_at
deleted_at (soft delete)
UNIQUE (tenant_id, user_id)

addresses

PK id (UUID)
FK customer_id (UUID)
IDX tenant_id (UUID)
label (Home/Work/Other)
line1 · line2
city · state · pincode
country (default: IN)
latitude · longitude
is_default (BOOLEAN)
deleted_at (soft delete)

BUSINESS LOGIC & CACHE

Tier Calculation Logic

BRONZE → default (0 pts)
SILVER → 200 pts OR 5 orders
GOLD → 1,000 pts OR 20 orders
PLATINUM → 5,000 pts OR 50 orders
Auto-recalculates on every
awardLoyaltyPoints() call

Redis Cache

Customer profile cache
Frequently accessed data
Rate limit counters (gateway)
OTP storage (identity-service)

Data Isolation

Hibernate @Filter on every query
condition: tenant_id = :tenantId
No cross-tenant data leaks
Soft delete on all records

Welcome 50 pts on registration

 Relationships

Customer ← 1:N → Addresses

Customer scoped to 1 Tenant

1 User → N Customers
(one profile per store)
